Outdoor Living Done Well

Fire-Away fire pits cleverly incorporate three identical pieces of steel, interlocking them one by one, to support each other and create a cantilevered, sculptural form. Architecturally designed, Fire-Away is available as a collapsible flat-pack – perfect for storage and holiday getaways – or as a larger, welded, more permanent feature for beautifully landscaped gardens.

The open triangular design creates the perfect formwork for lighting a fire, allowing it to draw air from underneath to create a hotter fire with less smoke.

Proudly Australian Made from laser cut mild steel, Fire-Away is designed to naturally weather, establishing a bronzed outer layer of rust while maintaining structural integrity for a lifetime of outdoor enjoyment.

Our Story

Fire-Away was born in a Sydney garage in 2014 to brothers Paul and Daniel. Paul, an Architectural Graduate and Daniel, a Medical Student are about as different as brothers come. Paul's creative ideas and Dan's meticulous reasoning have resulted in many differences of opinion over the years. Fortunately this time the concept of an interlocking sculptural fire pit was realised. With Paul's Graphic Designer wife, Lou, joining the force, they're a powerful team striving for great possibilities.

*“Three modest pieces of steel,
united in a sculptural form*

*as a fitting tribute to every campfire story,
starlit dinner and
alfresco evening...”*
